香氛系统 Fragrance system

- 1.全新一代的雾化技术，可使得雾化直径较小，雾化液滴的均匀性较好。
 - 2.雾化颗粒度细，尺寸分布均匀，雾化效果好，扩散均匀，在自然光下能明显感觉到雾化柱的喷射。雾化喷嘴无喷油，无颗粒喷出，长时间雾化，无积油。喷嘴位置无凝固、堵塞现象，操作维护量少。
 - 3.雾化量大，效果好。纳米雾化技术和可循环回油技术结合，节油率在30%以上。更精准的雾化嘴，有效控制气泵压力，减少电耗。
 - 4.覆盖面积大，可与空调系统连接，适用于，酒店，商场，酒吧，大堂。
- 1.A new generation of atomization technology can make the atomization diameter smaller and the uniformity of atomized droplets better.
 - 2.The atomization particle size is fine, the size distribution is uniform, the atomization effect is good, the diffusion is uniform, and the spray of the atomization column can be clearly felt under natural light. The atomizing nozzle has no fuel injection, no particle ejection, long-term atomization, and no oil accumulation. There is no solidification or blockage at the nozzle position, and there is little maintenance and operation
 - 3.Large atomization amount and good effect. The combination of nano atomization technology and recyclable oil return technology results in an oil saving rate of over 30%. A more precise atomization nozzle effectively controls the pressure of the air pump and reduces power consumption.
 - 4.It has a large coverage area and can be connected to the air conditioning system, suitable for hotels, shopping malls, bars, and lobbies.

Specification 说明

AHU自动喷雾除臭系统，通过内置的空气压缩机产生空气，程序控制器控制分气系统将空气输送到雾化喷嘴，雾化喷嘴将工作液充分雾化，均匀分布在空间，在微小的雾化滴液表面形成了极大地表面能。该表面能可以吸附空气中的氨、硫化氢、有机胺、烟味等异味分子，并使异味分子的结构发生变化，变得不稳定；此时，溶液中的有效分子可向异味分子提供电子，与异味分子发生反应；同时，吸附在表面异味分子也能与空气中的氧气发生反应。经过工作液作用，异味分子将被吸附、分解，从而达到异味净化的目的。

AHU自动喷雾除臭根据不同型号，可以匹配不同类型的雾化单元，组成不同类型的喷雾系统，以满足不同环境的需求。

AHU automatic spray deodorization system generates air through the built-in air compressor, and the program controller controls the air distribution system to deliver air to the atomizing nozzle, which fully atomizes the working fluid and distributes it evenly in the space, forming great surface energy on the surface of tiny atomized droplets. This surface can adsorb odor molecules such as ammonia, hydrogen sulfide, organic amines, and smoke in the air, and cause changes in the structure of odor molecules, making them unstable; At this point, the effective molecules in the solution can provide electrons to the odor molecules and react with them; At the same time, odor molecules adsorbed on the surface can also react with oxygen in the air. After the action of the working fluid, odor molecules will be adsorbed and decomposed, thereby achieving the goal of odor purification.

AHU automatic spray deodorization can match different types of atomization units according to different models to form different types of spray systems to meet the needs of different environments.
